

# YacaLite v. 0.6 — What's New

Pierre — 2016-06-15

This document lists the new features included in version 0.6 of YacaLite.

## Augmented Set of Components

The set of components has been augmented (see the v. 0.6 palette below).

One new component was added (see arrow): the **“help task”** models actions that consist of providing help, support or guidance to specific stakeholders of a process. Other components remain unchanged.

## Behaviour of the Canvas Area

Vertical and horizontal gridlines were extended. This is a request from Mikko. Issues with adding 5 vertical or horizontal gridlines together have not been fixed yet.

## Yaca Diagram File Portability

The Yaca diagram files created with v. 0.5 are (should be) fully readable in v. 0.6.

If you have any difficulty in using this version, please let me know: [yaca@bonnal.eu](mailto:yaca@bonnal.eu)
